<b>Description</b>	
description:	<p>Based on the Digital Terrain Model (DTM) DGM10_NRW_B_NL_ohne_anthropo_RF (dated: 15.12.2009) and its derived morphometric Terrain-Factors, the geomorphographic map (GMK10_Rur) structures the terrain-surface in defined morphographic Terrain Units.</p> <p>A geomorphographic map enables systematic approaches to the geofactor terrain in scientific Mapping and information Systems independently of scale. Among others, the GMK10_Rur incorporates the terrain units of category 1 (bottom areas, summit areas and slopes) of the former SARA-Program (see: KÖTHE, 1996), where plain areas are classified apart from slopes. Terrain units of category 2 are provided in a separate dataset(Kategorie_2.flt), where type 21000 indicates convergence areas, 22000 divergence areas and 23000 intermediate Areas (areas mediate between convergence and divergence). In accordance to the lack of category 3 terrain units of Sara (Slope-steepeening), the GMK10_Rur includes the terrain units 'slope' and 'plain terrain'.</p> <p>Literature:</p> <p>KÖTHE, R. (1996): Entwicklung eines Systems der digitalen Reliefanalyse für geowissenschaftliche Anwendungen – insbesondere als Element bodenkundlicher Vorhersagemodelle. – Abschlußbericht zum DFG-Projekt "Digi-Relief" (1989-1993), 94 S. [Geogr. Inst. Univ.Göttingen, not published]</p>
more information:	Original Data (.flt & .hdr-files) can be provided on demand.
abbreviations used in data:	See documentation

## Example

Part of the GMK\_10\_Rur&Reliefparameter: Terrain units displayed in ArcGIS
